Resume... Output [Icons] [Run]

Enter Number of Candidates: 2

===== MODULE 1: RESUME PROCESSING =====

Enter Details of Candidate 1
Name: sound
Qualification: btech cse
Experience (Years): 4
Skill: java
Resume Uploaded Successfully!

Enter Details of Candidate 2
Name: vishali
Qualification: btech it
Experience (Years): 3
Skill: python
Resume Uploaded Successfully!

===== MODULE 2: CANDIDATE SCREENING =====
sound -> Skill Matched
vishali -> Skill Not Matched

===== MODULE 3: CANDIDATE RANKING =====

----- Candidate Report -----
Name      : sound
Qualification : btech cse
Experience  : 4 Years
Skill      : java
Score      : 100
Rank       : 1
Status     : SELECTED

----- Candidate Report -----
Name      : vishali
Qualification : btech it
Experience  : 3 Years
Skill      : python
Score      : 50
Rank       : 2
Status     : REJECTED

=== Code Execution Successful ===

Project Description: (here you write what you did in this project (contribution) including Model Description)

The AI-Powered Resume Screening and Candidate Ranking System is a smart recruitment solution that uses Artificial Intelligence (AI), Machine Learning (ML), and Natural Language Processing (NLP) to automate the hiring process.

The system analyzes resumes, extracts important information such as skills, education, experience, and certifications, and compares it with the job requirements provided by recruiters.

Based on the matching score, candidates are ranked according to their suitability for the job.

This helps organizations reduce manual screening efforts, save time, improve hiring accuracy, and efficiently manage large numbers of job applications while supporting fair and data-driven recruitment decisions.
